NOTE:

All regional estimates discussed in this article is exclusive for the original ARMM territory only. However, ARMM legally does not exist as of writing, thus the term BARMM is used to avoid confusion among the readers.

TECHNICAL NOTES

This statistical report covers four (4) poultry (chicken, chicken egg, duck and duck egg) commodities.

The data on these commodities include: volume of production (in metric tons) and inventory of animals (in bird).

The data on inventory and volume of production are taken from the regular surveys conducted by PSA. The Backyard Livestock and Poultry Survey (BLPS) covers one (1) of the four (4) replicate samples of the Palay and Corn Production Survey (PCPS). It consists of 15,032 sample households in 1,079 sample barangays nationwide for Chicken and Duck.

Concepts and Definitions

Backyard Farm – any farm or household, whether farming or non-farming, tending at least one head of animal and does not qualify as a commercial farm.

Inventory – the actual number of domesticated animals present in the farm as of a specific reference date.

- *Beginning inventory is the number of live animals present in the farm at the beginning of the reference period, i.e. for January to June 2016, the beginning inventory is as of January 1, 2016; for January to March the beginning inventory is as of January 1.*
- *Ending inventory is the number of live animals/remaining stocks present in the farm at the end of the reference period, i.e. for January to June 2016, the ending inventory is as of October 1, 2016; for January to March, the remaining inventory is as of October 1.*

Volume of Production – the quantity of locally-raised animals disposed for slaughter which includes animals shipped-out for slaughter. This is expressed in number of heads, or in metric ton, liveweight equivalent.
